

# Architecture in IT

<b>Course name:</b>	<b>Architecture in IT</b>
<b>Partner:</b>	<b>IBM</b>
<b>Description:</b>	<p>The course is designed for students interested in architecture as an IT discipline. The purpose of the course is to provide students with an understanding of IT Architecture, project management, design and architectural thinking principles, different domains within architecture. Architecture will be shown through constant practice, design skills training, understanding architecture frameworks with an additional brief vision of technologies and architecture patterns. Students divided into teams will work on preparing logical solution, gathering requirements, building a use case model and on presenting their work to stakeholders.</p> <p>Whether one's wants to be a Service manager, Project manager or an Engineer - you will always find on your way coworkers responsible for a solution design and turning ideas into reality. The course is therefore designated to learn how to work as an Architect, how to understand Architects from the position of stakeholder with an overview of the whole thinking and creation process until the solutioning.</p>
