Aims and Scope

We have the pleasure to invite you to participate in a conference "Knowledge Acquisition and Management". The following group topics, concerning both theory and applications, will be included (unavoidably incomplete):

- Data mining and knowledge discovery;
- Methods and tools of artificial intelligence;
- Knowledge dynamics and machine learning;
- Organizing the knowledge centers and knowledge grid;
- Business intelligence and intelligent systems;
- Distance learning and knowledge sharing;
- Knowledge engineering and validation.

We expect that the conference will enable an exchange of information and experience as well as it will show the preferable tendencies of research area development. The aim of the conference is to create possibility of presenting methods, techniques and tools in knowledge acquisition and knowledge management processes.

KAM'2010
